SAINATH BEJGAMWAR, Software developer

Pune, India | 9866991062| b.sainath2004@gmail.com | LinkedIn

SUMMARY

Software Developer with knowledge of Python, MySQL, data analysis, and data visualization. Experienced with tools such as Jupyter Notebook, Git, GitHub, Visual Studio Code, Microsoft Excel, and **Power BI**. Familiar with AI/ML concepts, including **Retrieval-Augmented Generation (RAG) pipelines, vector databases, embeddings, and text chunking**. Passionate about **developing efficient solutions**, analyzing data, and leveraging AI technologies to solve real-world problems.

TECHNICAL SKILLS

- Programming Languages: **Python, SQL**
- Database Management: **MySQL, Vector Databases**
- Data Analysis & Visualization: **Data Analysis, Data Visualization, Microsoft Excel, Power BI**
- Tools & Technologies**: Jupyter Notebook, Visual Studio Code, Git, GitHub**
- AI/ML & Generative AI: **RAG Pipelines, Embeddings, Text Chunking, Vector Search**

PROJECTS

RAG-Based College Assistant

Python | FastAPI | React | Pinecone | Ollama | Llama 3.2

- Built a **RAG-based AI assistant** that answers student questions by searching through college policies, attendance rules, and academic guidelines.
- Designed a **retrieval → context → generation pipeline** with a React frontend and FastAPI backend for interactive queries.
- Developed a PDF processing pipeline with PyMuPDF and Nomic-Embed-Text to chunk and embed policy documents, then store them in Pinecone for retrieval.
- Integrated Llama 3.2 with Ollama to generate answers from retrieved policy content, reducing incorrect and unsupported responses.

Loan Default Prediction System

Python | Pandas | NumPy | Scikit-learn | Random Forest | Streamlit | Matplotlib | Seaborn |

- Developed a **machine learning model to predict borrower default risk** using a loan dataset sourced from Kaggle.
- Performed data cleaning, preprocessing, and feature engineering to **improve data quality and model performance.**
- Conducted Exploratory Data Analysis (EDA) to identify key factors influencing loan repayment and default patterns.
- Implemented and evaluated a Random Forest Classifier, achieving **85% prediction accuracy** on the test dataset.
- Developed an interactive **Streamlit web application** for real-time loan default risk prediction using Python, Pandas, NumPy, and Scikit-learn.
